

CBAC Persistent Slab Bingo

Historically shallow snowpack	Slab avalanches on the Deli Trail	The real slim shady!	That's why I left Colorado	More worrisome, a few of these avalanches failed after the storm
Hip high avalanches	Remote trigger from 1000' away	A terrible pre-storm setup that I can't recall ever seeing	Holy Santa Claus \$hi+	This is where the meatball gets real spicy
No signs of instability until we triggered an unsurvivable avalanche	We are going cross-eyed documenting hundreds of avalanches	Winds increased. More D2.5 to D3s ran	It is hard to put into words what I experienced today.	Three prominent weak layers in the snowpack
That video is AI	I miss the facet sluffs	4Runner got stuck in debris on Peanut Lake Road	Most exciting remote trigger we've seen in our career	How many bowls are on Cement Mtn? They all have avalanches. Silly mountain.
Snowpack almost doubled last week	Need a sensitivity beyond touchy: "snowpack would like to speak with the manager."	Augusta slid all the way to the mine	That's the most beautiful nightmare fuel I've ever seen. WTF.	It's a really nasty setup
